

YAUHENI BUKA

APPLIED AI / LLM ENGINEER

Warsaw, Poland | +48 571 333 394 | yauhenibuka.work@proton.me
github.com/slading | portfolio-yb-ochre.vercel.app

PROFESSIONAL SUMMARY

Code-first Applied AI / LLM Engineer building reliable AI systems with Python, FastAPI and TypeScript. Portfolio work covers structured LLM outputs, deterministic guardrails, RAG, multi-provider integration, agentic pipelines and cost controls. Focused on testable designs, explicit failure handling and clearly documented architectural trade-offs.

SELECTED AI ENGINEERING PROJECTS

Compliance Decision-Support Service

Python | FastAPI | Pydantic | Groq API | pytest | uv

- Built a typed, static-first decision pipeline combining deterministic policies with optional LLM-assisted analysis and validated structured outputs.
- Implemented safe merge, provider-failure fallback and dependency-injected network isolation; maintained 46 passing offline tests plus an opt-in live integration test.

RepoLens - AI-Powered Repository Analyzer

Next.js | TypeScript | Multi-provider LLM APIs | SSE | Docker | CI

- Built a repository-analysis workflow with file filtering, configurable context optimization, multiple chunking strategies and map-reduce synthesis for larger codebases.
- Integrated OpenAI, Anthropic, Groq and local Ollama providers with SSE progress reporting, token/cost counters, Docker packaging and a CI workflow.

AI Prompt Orchestrator

Python | FastAPI | Next.js | Groq | LLM cost governance

- Designed a controlled three-stage clarification, resolution and synthesis pipeline using different models for cost-aware task allocation.
- Added token-cost accounting and a weekly budget guard, and documented the scaling limitation of in-memory session state and the required persistent-process deployment model.

ADDITIONAL PROJECTS

[SentinelAI](#) - deterministic transaction-risk prototype with FastAPI, Pydantic, Groq and Docker. | [Simple RAG](#) - ChromaDB retrieval using sentence-transformers with optional Groq generation.

TECHNICAL SKILLS

Applied AI: LLM integration, structured outputs, tool calling, RAG, multi-provider orchestration, evaluations, guardrails
Engineering: Python, TypeScript, FastAPI, Next.js, Pydantic v2, asynchronous APIs, REST, dependency injection, pytest
Reliability: deterministic routing, safe fallback, timeouts, bounded retries, test isolation, cost controls
Delivery: Docker, Git, uv, GitHub Actions, Vercel and persistent-process deployment fundamentals
